*"We couldn't buy the gear we needed, so we made it ourselves."*

**dis·sent /də 'sent/**

\verb\ - to take an opposing view; to differ in opinion from the majority.

*"I would be the guy stopping on the skin track about an hour-and-a-half into the day and re-taping my heels and ankles. Genetically blessed with overly sweaty feet and fragile skin I suppose. Whatever the case, no matter what socks I would use, they would ravage my feet into a blistered mess. Wasting my time, and the time of the group. After years and years of doing that (and burning through countless rolls of preventative tape), I tried out some medical grade compression socks and they were by far the best thing I had tried.*

*How could it be that nobody was doing this already? How could the largest brands in the outdoor space overlook such a critical product?*

*So, I started going down the rabbit hole to see what was possible. How the compression construction, an improved fit and specific materials could together improve your chances of having the best possible day in your boots. Someone had to do this, and it might as well start here. So what began as a curious pursuit to remedy my own foot issues, quickly turned into a fire-breathing mission to elevate the category. You've come to the right place for better days in the mountains."*

Josh Hall, Founder.
