WRITE  
YOUR ADVENTURE

## True story:

With only a single pair of gloves, in certain climates and activities, time will be limited.

When you take part in winter sports and explore the mountains, you will be experiencing different conditions and climates.

HOW TO EQUIP YOUR  
HANDS FOR DIFFERENT  
CLIMATES?

**The solution is  
always in nature.**

*#Write your  
adventure*

  
THERM·iC

## Biomimicry-based Therm-ic solution

A goose's plumage is made up of 3 layers:

- 1. Micro feathers (protects the skin)
- 2. Down feathers (protects against cold)
- 3. Outline feathers (protects against wind and water).

The thickness of these layers varies according to the climate and the season. Therm-ic has developed 3 layers of glove which can be added to or removed depending on the climate.

### ① Liner

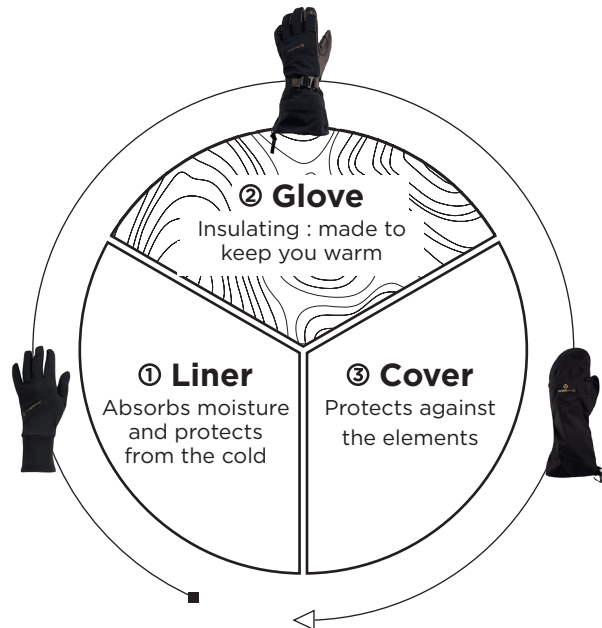

The insulating first layer absorbs moisture and protects hands from the cold.

### ② Gloves / lightweight gloves

The second layer protects you against the cold like the goose's down feathers that trap against the air thanks to their bush shape.

### ③ Cover

Your protection against the elements. The asymmetrical construction of fibers prevents water and wind from infiltrating.

## Biomimicry-based Therm-ic solution

Glove layer combinations vary according to climate and use. Here are a few examples:

By varying the thickness of each layer in the glove, we can provide a solution for every climate.

Why adopt layering?

**LAYERING** ALLOWS YOU TO STAY **WARM AND DRY** ALL DAY LONG **NO MATTER WHAT CONDITIONS YOU HAVE TO DEAL WITH.**

## Ski & freeride skiing

### Freeride Ultra Heat

T46-2100-001
