

"AMAK"

Polar Bounce Technology

The AMAK incorporates M-TPEE Performance Capsules that maintain flexibility and softness at low temperature conditions. Strategically placed in both the forefoot and rearfoot. This ensures that runners can maintain their natural gait and foot mechanics without compromise.

Roomy Toe Box

The Amak trail running shoe boasts a slim, comfortable last that secures your foot while providing ample toe room. This design offers extra protection during downhill runs without compromising agility on technical terrain.

Ice Traction System

AMAK's integrated traction system ensures optimal performance on diverse winter terrains. It combines Vibram Traction Lite rubber spikes for lightweight grip on packed snow and softer trails with MacNeil metal spikes for extreme traction on icy surfaces. This dual-spike system provides unparalleled security and adaptability in challenging winter conditions.
