

HOW PET BOTTLES COME TO LIFE

1
Plastic bottles are part of our daily life, they are made of PET and after being used they can be recycled.

2
Used PET bottles are repurposed following standard recycling procedure.

3
The PET flakes are melted and spun into new fibers.

4
The fibers are then used to produce the thermal insulation in cold weather jackets.

5
Every jacket insulated with Thermore[®] allows recycling of up to 10 bottles.
